Executive Due Diligence Commentary**Viability & Performance Attribution**

Over Sep 2021 to Aug 2026, AGTHX compounded at 10.4% annually versus 12.7% for SPY, an annualized excess return of -2.3%. CAPM alpha was -2.8% (t-stat -1.10), which is not statistically distinguishable from zero over this window. The information ratio of -0.26 and a batting average of 48% do not yet demonstrate a repeatable edge.

Downside Risk & Liquidity Profile

Maximum drawdown was -33.6% against -23.9% for the benchmark; the fund fell for 11 months from its October 2021 peak and recovered after 17 months. Annualized volatility of 18.8% and down-capture of 114% show the fund has not cushioned drawdowns relative to the index. As a mutual fund vehicle, liquidity is expected to be daily; the committee should still confirm redemption terms, share-class fees, and capacity.

Market Alignment & Current Macro Trends

With beta of 1.13 and up/down capture of 104%/114%, the return pattern implies a higher-beta, pro-cyclical exposure. This template commentary does not interpret the current rate, inflation, or growth-versus-value backdrop; a holdings-based factor review is recommended before drawing macro conclusions.

Portfolio Fit & Asset Allocation Role

On the quantitative evidence alone, AGTHX screens as a candidate for a watch list role. R-squared of 0.91 and tracking error of 5.9% describe how much of the risk budget it would consume relative to SPY. Final sizing should follow a qualitative review of process, team stability, and fees.

Methodology: month-end adjusted-close returns (distributions reinvested). Annualization uses 12 periods. Sharpe and Sortino use the monthly T-bill rate as the hurdle; Sortino uses downside deviation of excess returns. Alpha and beta come from an OLS regression of fund excess returns on benchmark excess returns; alpha is monthly intercept x 12. Capture ratios compare annualized geometric returns in benchmark up and down months. The final heatmap column compounds the months shown for each year (partial years are not annual returns).
